

*Nathan Klein recently became the first person in the world to receive gene therapy for Parkinson's disease. The procedure was part of a new clinical trial led by Dr. Michael Kaplitt of NewYork-Presbyterian Hospital and Weill Cornell Medical College. If successful, this trial may mark a new era in the way physicians treat not only Parkinson's, but also other neurological disorders. To learn more, visit [nyp.org](http://nyp.org).*

*Will gene therapy revolutionize the way we treat Parkinson's disease?*
