The Pediatric Motility Center
Comprehensive, family-centered diagnosis and treatment

We are one of only a few pediatric motility programs in the country, and the only one in the New York metropolitan region to provide motility studies (such as esophageal and anorectal manometry) in infants, children, and adolescents. Motility – the movement of the gastrointestinal tract – involves a complex interaction of the gut, nerves, and brain. Pediatric functional gastrointestinal and motility disorders are common, and can range from relatively benign conditions such as constipation to more serious disorders such as Hirschsprung’s disease. Affiliated with the NYP Advanced Center for Digestive Care, we offer one-stop, comprehensive, family-centered diagnosis and treatment.

SYMPTOMS WE TREAT

- abdominal distention
- constipation
- diarrhea
- difficulty swallowing
- heartburn
- nausea
- pain
- vomiting

CONDITIONS WE TREAT

- anorectal disorders
- congenital anorectal malformations
- congenital esophageal malformations
- esophageal achalasia
- gastroesophageal reflux disease (GERD)
- gastroparesis
- incontinence
- intestinal pseudo-obstruction syndrome

OUR EQUIPMENT/EXPERTISE INCLUDES

- high-resolution esophageal manometry
- high-resolution 3D anorectal manometry
- pH impedance testing
- wireless video capsule endoscopy
- therapeutic endoscopy
- biofeedback

OUR LOCATION
Helmsley Medical Tower
505 East 70th Street (at York Avenue)
3rd Floor (HT-3)
New York, NY 10021
