Statement of Need

Heart disease remains the most common cause of death in men and women in the United States. Remarkable advances in cardiovascular medicine and technology evolve at rapid pace and directly affect clinical guidelines. Physicians and allied health professionals require continuous updates on the most recent guidelines in order to offer their patients innovative treatment. In a busy clinical practice, it can be a challenge to stay abreast with the most recent advances and guidelines. This program will provide physicians and allied health professionals with the latest guidelines that are relevant in clinical cardiovascular medicine. The program attendees will have a unique opportunity to review challenging clinical cases while afforded the opportunity to ask questions in a group setting with a panel of experts.

Target Audience

Primary care physicians, cardiologists, fellows, residents, medical students, physician assistants, nurse practitioners, registered nurses, and all cardiac health care providers.

Educational Objectives

It is intended that NewYork-Presbyterian Queens CME activity will lead to improved patient care. At the conclusion of this program, participants will be able to:

- Describe the updated management of atrial fibrillation and the latest addition in therapeutic options available and their applicability to clinical practice.
- Specify indications for transcatheter aortic valve replacement, transcatheter mitral valve intervention and appropriate indications for referral to a valve team from an outpatient setting.
- Identify patients with left ventricular diastolic dysfunction and current management options in everyday clinical practice.
- Describe what clinicians should know about cybersecurity risks in the medical environment of implantable medical devices including how to reduce the risk of exposure, and how to discuss cybersecurity risks with patients.
- Specify the new hypertension guidelines and their applicability to current clinical practice.
- Describe components of Preventive Cardiology: Risk assessment and evaluations in routine clinical practice.
